## **MedWand Solutions, Inc. and AMD Global Telemedicine Inc, Partner to Enable Next Generation of Telehealth *Single Sign-On of MedWand Remote Exams into Existing EHR Systems***

**(Rancho Santa Margarita, CA) July 27, 2021** – Leading the way in delivering digital healthcare technologies for clinicians and patients, [MedWand™ Solutions](#) and [AMD Global Telemedicine](#) invite the medical industry to “*log-in to the future of telehealth.*”

As the first outcome of their new alliance, the two companies will release **AMD / MedWand Connect: Virtual Care Clinic™**. This new software provides seamless operation from commonly used EHR solutions to support a seamless workflow between scheduling, clinical quality telemedicine consultations, and two-way data exchange.

" In our company's 30-year history of delivering remote healthcare solutions, the industry has never seen anything quite like this," shared Eric Bacon, President, AMD Global Telemedicine. "Clinicians now have everything they need for primary care consults within a single MedWand device, eliminating the need for multiple vital sensors; and for the provider organization, we have enabled single password log-in for telemedicine consults through their existing EHR systems."

Bacon adds, "From a single-entry point, clinicians can review a patient's medical history, conduct a clinically accurate remote exam via MedWand, add their notes, and save all of these results directly back to the patient's record within the EHR. This is a game changer."

“Integrating our MedWand with existing Practice Management and EHR solutions eliminates the most significant barrier to adoption of internet based virtual examinations,” said Robert Rose, President and COO, MedWand Solutions. “The key question has been: How do we enable clinicians to use these telemedicine tools without introducing yet another layer of software, records storage, and complexity? Well, today we have that answer.”

Transforming telemedicine, **MedWand** combines multiple clinically accurate vitals sensors and an Ultra-HD resolution camera. Operating via **AMD / MedWand Connect: Virtual Care Clinic** software clinicians can conduct comprehensive video consultations and physical exams over the Internet, with real-time monitoring and recording of key vitals. Data collected include core temperature, blood oxygen saturation and pulse rate, heart, lung and abdominal auscultations, electrocardiogram, and high definition otoscopic, oropharynx, and dermatoscopic exam images.

Dr. Samir Qamar, MedWand Solutions CEO said, “The development of the Virtual Care Clinic is what every telemedicine clinician has been waiting for. Doctors can now integrate clinical grade diagnostic telemedicine tools into their workflow without interruption to their existing software infrastructure. It's a complete solution that is both elegant and effective for the smallest private practice to the largest provider network.”

MedWand and AMD Global Telemedicine will showcase the newly announced software solution at the Venetian Hotel Las Vegas August 9-13, concurrent with HIMSS 2021 health information and technology show. Contact us at [info@medwand.com](mailto:info@medwand.com) to request an appointment for a private demo during these dates.

MedWand is in final drafting of its submission for 510(k) clearance by the FDA and is expected to be available for sale in multiple countries later this year. For more information visit [www.medwand.com](http://www.medwand.com).
